

Amin Keramati
Transportation and Logistics Graduate Student
Program: Logistics and Supply Chain System

Hometown: Iran (Esfahan)

What are some of your hobbies? I enjoy playing piano and painting.

What are some of your past/current research interests? I conducted my research on proposing a new mathematical models for Multi-Mode Resource-Constrained Project Scheduling Problem (MMRCPS) which maximizes NPV of activities completed by the projects' completion time.

Furthermore, currently I have carried out an investigation into the geometrical model which is inspired by the rectangular packing problems and MRCPSP-GPR (Generalized Precedence Relations) models.

How did you become interested in your field of study? As I am interested to operationalize what I learned theoretically, I found Transportation & Logistics fields suitable for making my theoretical knowledge of mathematical model practical.

What do you like to do in your spare time? I enjoy listening to classical music or watching movies.

What are your goals or future plans? I plan to expand my knowledge of transportation and logistics for operationalizing what I learn theoretically.
