JULY 1972

PREFACE

In the development and presentation of data such as follows, many people are involved. This includes personnel in the Public Service Commission, State Wheat Commission, and the Transportation Institute, such as clerical help and graduate students who spent many hours transcribing data from reports and hand tabulating into usable form.

Most important in providing funds, data, and labor, however, are the members and officers of the two State agencies. These are extremely important data in the scheme of transportation policy and rate-making.

TRUCK AND RAIL SHIPMENTS OF
BARLEY, OATS, RYE AND FLAX
FROM NORTH DAKOTA
1969-1970 AND 1970-1971

Dale O. Anderson*

Introduction

This report represents a continuation of a series of analyses of the patterns of distribution of grains from North Dakota which began in 1956-1957.¹ Each of the previous analyses have played important roles in providing basic information for the transportation rate-making process and as input into other research. Because the research has been supported both within the University and by those in the grain marketing industry, one of the best sets of data portraying State exports of grain is available to North Dakotans.

The general traditional approach to the marketing of barley, oats, rye, and flax from North Dakota has not changed greatly. The major portion of these grains is destined to the terminal markets of Minneapolis-St. Paul and Duluth-Superior, although the proportion going to each destination may change from year to year. The pattern of shifting from rail to truck as a mode for shipping grain is not a major factor in the marketing process of these grains.

Objectives

The primary purpose of this report is to illustrate the distribution methods and patterns of barley and oats. Basic data regarding this activity for rye and flax are also reported.

*Acting Director, Upper Great Plains Transportation Institute, North Dakota State University, Fargo, North Dakota.

¹See Agricultural Economics Reports 14, 15, 17, 44, and 57; Agricultural Experiment Station Bulletin 462; Upper Great Plains Transportation Institute Report 14, Research Report 12; and Upper Great Plains Transportation Institute Report 16, Research Report 13, North Dakota State University, Fargo, North Dakota.

Source of Data

The data representing the 1969-1970 and 1970-1971 periods are the results of the requirement of the North Dakota Public Service Commission that all North Dakota elevators report monthly movements of all grain by truck and rail. Subsequently, these data represent the actual reported data for the entire population of North Dakota elevators. As in past reports, the data are reported by crop reporting district (Figure 1).

Sources of Trucked Barley

During the decade of the 60's, the major origins of trucked barley have narrowed to Crop Reporting Districts 6 and 3 with about half to one-third of the total originating in District 6 (Tables 2 and 3).

Obvious changes have occurred in the general origins of trucked barley. In 1963-1964, about 27 percent originated in the western part of the State (Districts 1 and 7), while 57 percent originated in the eastern part of the State (Districts 3, 6, and 9). Only eight percent of the total originated in the west in 1970-1971 while 80 percent originated in the east during this period. The proportion originating in the central districts declined from 16 to 12 percent.

The absolute volume shipped by truck from each district decreased in five of the Districts, which consisted of Districts 1, 2, 4, 7, and 8. Increase in the absolute volume of barley shipped by truck were observed in the remaining crop reporting districts. A decline of the total volume of barley shipped was observed during the 1963-1964 to 1969-1971 time period. A sharp increase in trucked then took place in 1970-1971.

Proportion of Barley Shipped by Truck

While motor carriers were increasing their share of the total barley traffic from 1956-1957 through 1965-1966, there was a reversal of that trend--about 12.2 percent of the total 1967-1968 shipments, 9.9 percent in 1968-1969, and 7.2 percent in 1969-1970 moved by truck (Table 3). However, in 1970-1971 an increase from 7.2 percent in 1969-1970 to 24.7 percent of the total volume shipped was observed. This change was also reflected in an increase in the proportion of barley shipped by truck in all nine of the crop reporting districts.

Destinations of Trucked Barley

An obvious trend in destinations of trucked barley has continued through 1970-1971 (Table 5). Whereas Minneapolis-St. Paul, Other Minnesota destinations, and In-state locations were once the major destinations, Duluth-Superior has now become the dominant market for trucked

For the footnotes to this table, see page 49.

barley from North Dakota. While slightly less than one-fourth of the total was destined to Duluth-Superior in 1958-1959 and 73 percent to Minneapolis-St. Paul, Other Minnesota, and In-state destinations, nearly 88 percent went to Duluth-Superior in 1970-1971 while slightly less than ten percent went to the other three destinations. While Minneapolis-St. Paul ranks second, In-state destinations shipped to fourth with West Ports and States taking over third place as a major destination for trucked barley from North Dakota.

Sources of Trucked Oats

There have been observable changes in the origins of trucked oats since the early 1960's (Tables 8 and 9. While 29 percent originated in District 1 in 1963-1964, only 9.4 percent came from that district in 1970-1971. On the other hand, while eight percent originated in District 3 in 1963-1964, nearly 20 percent originated there in 1970-1971. In 1963-1964, nearly 15 percent originated in District 6, while 26 percent originated in that district in 1968-1969.

In 1963-1964, 45 percent of the trucked oats originated in the western part of the State (Districts 1, 4, and 7) and 42 percent in the eastern part of the State (Districts 3, 6, and 9). In 1970-1971, about 57 percent originated in the eastern districts, while only 20 percent came from the western part of the State.

The absolute total volume of oats shipped via truck decreased from a high of 16 million plus bushels in 1965-1966 to 11 million plus bushels in 1970-1971. This decrease is also noted in the shipments from the individual districts in which all but one district (5) showed a decrease in volume from 1965-1966 as compared to 1970-1971.

Proportions Shipped by Truck

The share of the oats traffic controlled by motor carriers seems to be declining in the last three years. During the 1960's the proportion hauled by truck was 34.2 percent in 1963-1964, 34.8 percent in 1965-1966, and 36.1 percent in 1968-1969. The 45.4 percent in 1967-1968, the highest ever recorded, does not seem to indicate a norm. A declining proportion of oats shipped via truck has been observed from 36.1 percent in 1968-1969, 25.3 percent in 1969-1970 and 20.5 percent in 1970-1971 (Table 11).

There do not appear to be important changes in the proportion shipped by truck from each district. Districts 2, 4, and 7 were the top ranking three most important districts in terms of proportions shipped by truck in 1970-1971. Only two districts (5 and 7) did not decrease in the proportion shipped by truck in 1970-1971 compared to 1963-1964.

Destinations of Trucked Oats

Two important trends appear regarding destinations of trucked oats. The first is that the major Minnesota terminal markets (Minneapolis-St. Paul and Duluth-Superior) are becoming the dominant markets for trucked oats. In 1970-1971, 81 percent went to these markets, while in 1963-1964, only 35 percent were destined there. At the same time, the proportion destined to livestock and horse feeding states of the Plains and the southwest has declined significantly to only ten percent of the total. The second trend is that the Minneapolis-St. Paul market is becoming the dominant market for trucked oats from North Dakota elevators; a role once played by the Midland and Southwestern states.

Shipments by Periods

For the second time in the time period covered in analyzing distribution patterns for North Dakota grains, shipments of barley, oats, rye, and flax, by time period are now available (Appendix Tables 9-16). Although the period represents only 24 months, there appear to be sharp fluctuations from season to season in the volumes of each commodity marketed from North Dakota elevators (Figures 2, 3, 4, and 5).

Number of Cars and Trucks

As in the case of the data regarding shipments by time period, data are available again regarding number of rail cars and motor vehicles used in hauling barley, oats, rye, and flax to market (Tables 13, 14, 15 and 16).

TABLE 7. TOTAL VOLUME OF OATS SHIPPED FROM NORTH DAKOTA BY TRUCK FROM EACH CROP REPORTING DISTRICT, 1956-1957 THROUGH 1970-1971
