PREFACE

This report represents a continuation of analyses concerned with the patterns and methods of distributing grain from North Dakota. This series began with the analysis of 1956-57 data and was published in Agricultural Economics Report 14, Department of Agricultural Economics, North Dakota State University. Subsequent years' data were analyzed in Agricultural Economics Reports 15, 17, 44 and 57, and Agricultural Experiment Station Bulletin 462. The compilation and analysis of the data for the year 1967-68 in this series were assumed by the Upper Great Plains Transportation Institute. Also, the data representing the 1967-68 period were the first results of the requirements of the North Dakota Public Service Commission that all North Dakota elevators report monthly movements of grain by truck and rail. Prior to 1967-68, the data had been estimated from questionnaires completed by a small portion or sample of country elevators.

TRUCK AND RAIL SHIPMENTS OF GRAIN FROM NORTH DAKOTA
COUNTRY ELEVATORS, 1971-1972

ABSTRACT

This report represents a continuation of analyses concerned with the patterns and methods of distributing grain from North Dakota.^{1/} The collection and compilation of this type of data began in 1956-57. The contents of this report, like its predecessors, is designed to provide the necessary data base for identifying trends in the distribution of grains from North Dakota.

Inspection of the compiled data indicates that during crop year 1971-72 a significant change occurred in the methods of marketing grain from North Dakota in comparison to previous years. For example, the proportion of Hard Red Spring and Durum Wheat shipped from North Dakota by truck steadily grew from 15.0 percent in 1958-59 to 39.3 percent in 1970-71. The data for 1971-72 indicates a dramatic drop in truck market share for this grain by over 10 percent. In other words, a traditional and obvious 13 year trend appears to have been reversed. It is likely that the primary cause of this down-turn was the introduction by the railroads of the 25 percent rate reduction on wheat moving to eastern markets from North Dakota, which came into effect in December, 1971. Truck market share of Hard Red Spring Wheat to Duluth-Superior for example, fell from 55.6 percent in 1970-71 to 36.9 percent in 1971-72. More dramatic, the percentage of Durum transported by truck to Duluth-Superior, declined from 64.4 percent in 1970-71 to 30.0 percent in 1971-72. The wheat eastbound rate reduction by the railroads appears to have been extremely effective in regaining a significant portion of the grain traffic from North Dakota, previously lost to the truck. The distributional pattern of all grains exported from North Dakota however, followed the traditional trend with over 90 percent moving eastbound to the terminal markets in Minneapolis-St. Paul and Duluth-Superior. Therefore, while the distribution patterns have not changed significantly since the previous year, the distribution methods have.

^{1/} See Agricultural Economics Reports 14, 15, 17, 44, and 57 and Agricultural Experiment Station Bulletin 462, and Upper Great Plains Transportation Institute Reports 14, 16, 17, 22 and 23, North Dakota State University, Fargo, North Dakota.

TRUCK AND RAIL SHIPMENTS OF GRAIN FROM NORTH DAKOTA COUNTRY ELEVATORS, 1971-1972

This report represents a continuation of analyses concerned with the patterns and methods of distributing grain from North Dakota. The collection and compilation of this type of data began in 1956-57. The contents of this report, like its predecessors, is designed to provide the necessary data base for identifying trends in the distribution of grains from North Dakota.

Objective of Report

The major emphasis in this report is to illustrate the distribution methods and patterns of grain from North Dakota origins. In addition, to demonstrate the seasonality of grain shipments from North Dakota, trends in shipments by months are identified. The patterns of distribution and monthly shipments for 1971-72 are compared to previous years' data.

Scope of Report

The data was tabulated according to the major characteristics which describe commodity flows. The major characteristics considered were: origin of shipment, destination of shipment, type of commodity shipped, mode of shipment, and time of shipment. These characteristics are defined as follows:

Origin of Shipments: The nine crop reporting districts in North Dakota (See Figure 1).

Destination of Shipments: Duluth-Superior, Minneapolis-St. Paul, Other Minnesota, Sioux City-Omaha-Kansas City, Other East and South, Midland States, North Pacific Ports, Northwest States, West, In-State, and Unknown Destinations.^{2/}

Types of Commodities (grain): Hard Red Spring Wheat, Durum Wheat, Barley, Oats, Rye and Flax.

2/The market of Minneapolis-St. Paul includes Savage and Shakopee; Other Minnesota relates to Red Wing, Hastings, New Ulm, and Mankato; Other East and South is composed of Wisconsin, Illinois, Indiana, Michigan, Ohio, Pennsylvania, New York, Rhode Island, Vermont, Maine, New Hampshire, Massachusetts, Delaware, New Jersey, Connecticut, Maryland, West Virginia, Kentucky, Tennessee, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Louisiana, Arkansas, and Virginia; Midland States includes the states of Nebraska, Kansas, Iowa, Missouri and South Dakota; Southwest States includes the states of Wyoming, Utah, Texas, Colorado, Arizona, New Mexico, Oklahoma, and Nevada; North Pacific Ports includes the ports of Portland, Seattle, Astoria, Vancouver, Longview, Tacoma, and Kalama; and Northwest States includes Montana, Idaho, Washington, and Oregon.

Mode of Shipment: Rail or truck. In addition the movement of non-competitive Commodity Credit Corporation (CCC) grain by rail is specified.

Time of Shipment: In terms of both specified months and years.

Source of Data

The data used to analyze the distribution pattern for August, 1971 through July, 1972 were obtained from all country elevators in North Dakota. The source of the data is the North Dakota Public Service Commission's "Grain Movement Reports." As in previous UGPTI reports, the data were obtained and analyzed by crop reporting district (Figure 1). Every country elevator in North Dakota is required to assemble and submit to the Public Service Commission such information desired by the Commission on a monthly basis.

Organization of the Remainder of the Report

While the same commodity flow characteristics are considered in this report as in previous reports of this nature, there is a difference in the organization and presentation of the material. The commodity flow characteristic "type of grain" is used to delineate major sections of the report. That is, each type of grain; wheat, barley, oats, rye and flax, has its own major section. The sections are presented in the order just indicated. In addition, the major section relating to all wheat is broken into two sub-sections, one concerned with Hard Red Spring wheat, the other sub-section with Durum wheat.

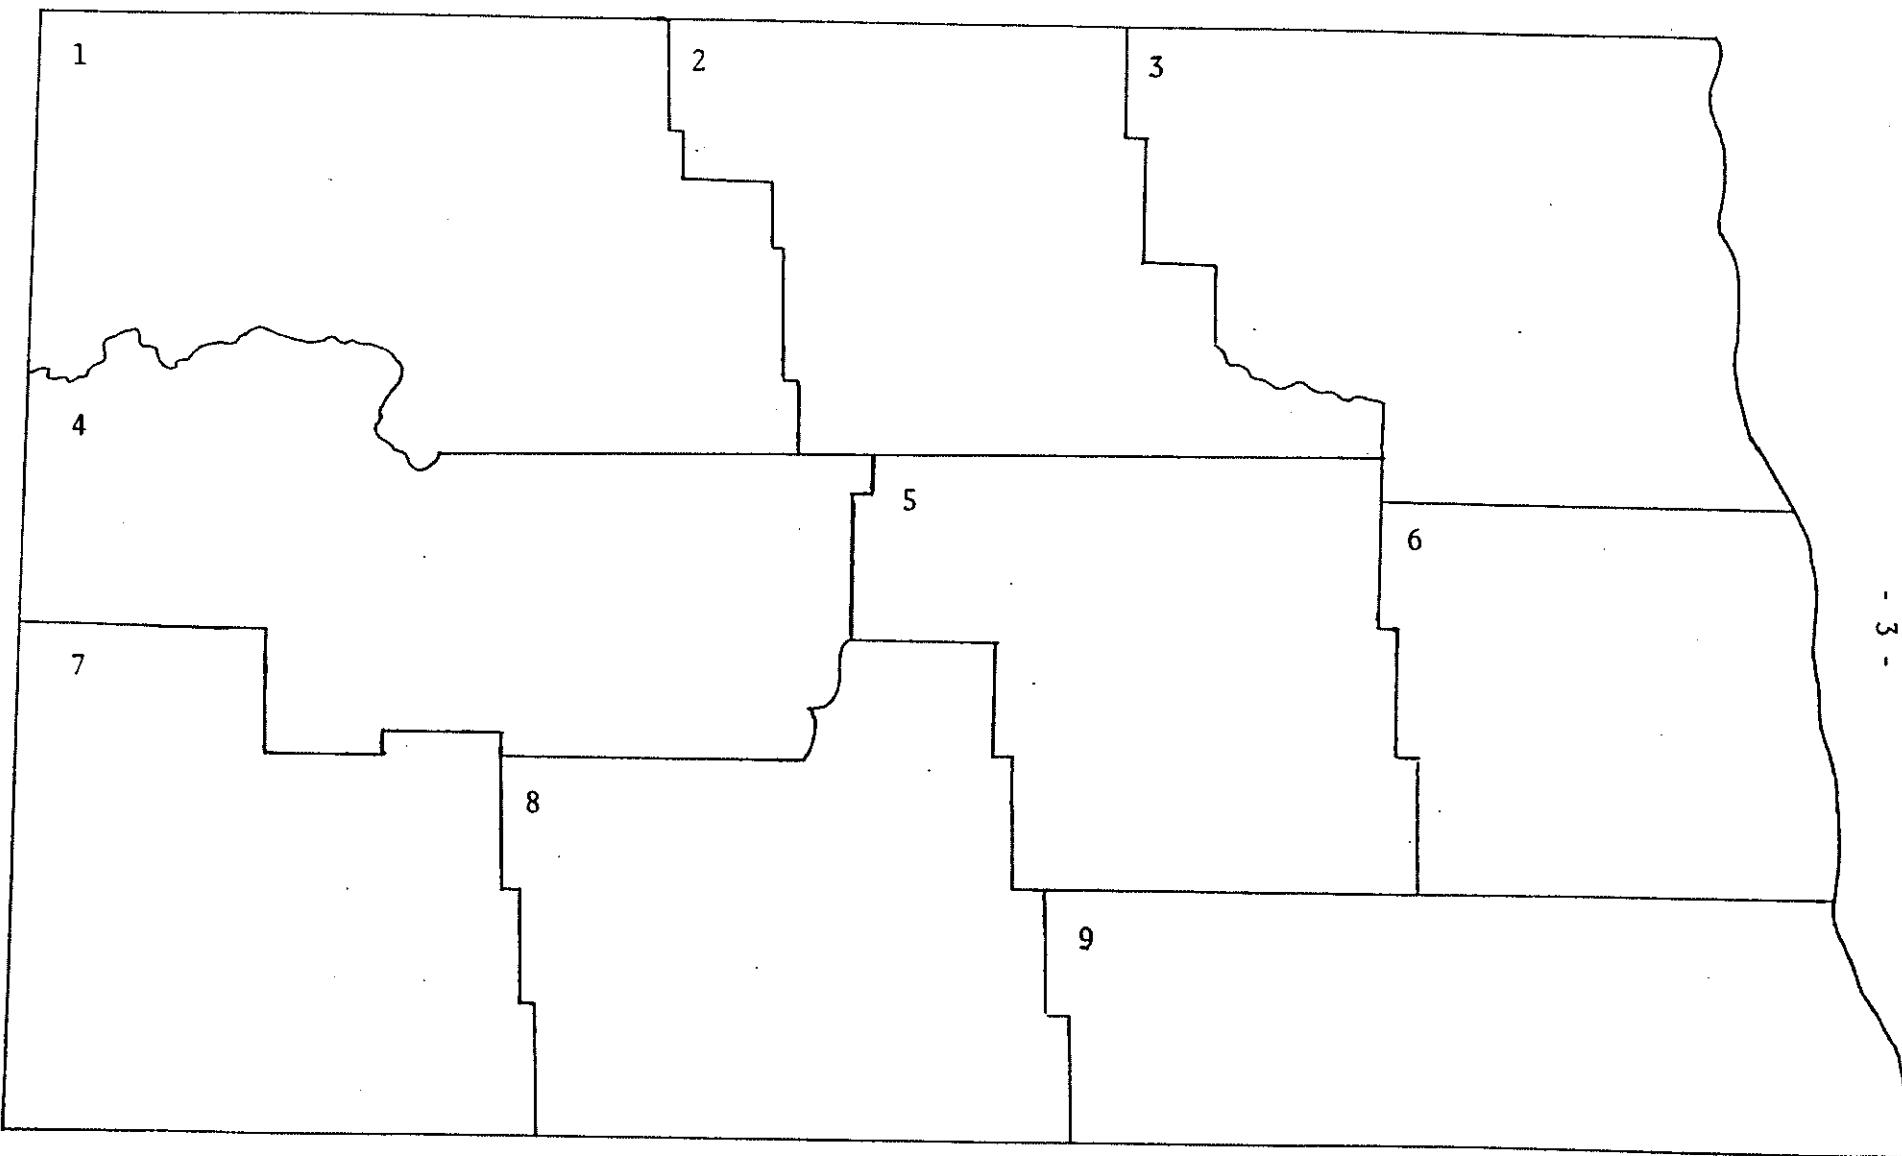

Figure 1. North Dakota Crop Reporting Districts.

Wheat

This section of the report is divided into three parts. The first part addresses itself toward all wheat (aggregation of Durum and Hard Red Spring wheats). Durum and Hard Red Spring wheats are then dealt with separately in the remaining two parts of this section.

All Wheat

During the 1971-72 crop year, 51,829,000 bushels of wheat were exported out of the state of North Dakota by truck, representing 27.7 percent of all wheat exported from the state (Table 1 and Figures 2 and 3). In the previous crop year, 1970-71, in contrast, more than 64,000,000 bushels were transported by truck representing 39.3 percent of the wheat transported out of the state of North Dakota during that crop year. In other words, the railroads increased their share of the wheat transportation market from 60.7 percent in 1970-71 to 72.3 percent in 1971-72, an increase of 11.6 percent. In comparison, from 1967-68 to 1970-71, railroad's market share fell from 73.8 percent to 60.7 percent, for a net loss in four years of 13.1 percent. The railroads came close to regaining in one year what they had lost in the previous three.

The southwestern area of the state (Crop Reporting District 7), reflected the highest use of trucks in 1971-72. That is, out of every 100 bushels transported out of Crop Reporting District 7, 37.6 bushels were transported by truck. At the other extreme, only 18.3 bushels out of every 100 bushels were transported by truck from Crop Reporting District 5 (central) in 1971-72. In contrast, it was the northeastern area of the state (Crop Reporting District 3) which reflected the highest use of trucks (55.4 bushels per 100 bushels) in 1970-71, the previous crop year.

Crop Reporting District 3 has been the primary source of trucked wheat in North Dakota for the last three crop years, where over 1 out of 4 bushels of wheat trucked out of the state of North Dakota originates in this Crop Reporting District (Table 2). In contrast, Crop Reporting District 9 in southeastern North Dakota originated a little more than 5 percent of all wheat shipped out of the state of North Dakota by truck in 1971-72. The northern third of North Dakota (Districts 1, 2, and 3) originated 56 out of every 100 bushels trucked from the state in 1971-72, while the southern third originated only 22.6. In 1970-71 the eastern portion (Districts 3, 6 and 9) of the state was the dominant source of wheat shipped by truck from North Dakota, originating over 45 percent of all trucked wheat. The eastern dominance was much less obvious in 1971-72 when 38 percent of all wheat transported by truck from North Dakota originated in Districts 3, 6 and 9. The western districts gained in prominence showing an increase from 29.0 percent in 1970-71 to 36.3 percent in 1971-72. The central districts remained relatively stable as sources of trucked wheat.

The 1971-72 crop year saw yet another remarkable turn-around. During the three previous crop years, 65 to 70 percent of all wheat trucked from

the state of North Dakota was destined for Duluth-Superior (Table 3). However, in 1971-72 only 58.4 percent was destined to this market. While in 1968-69 less than 1 out of 4 bushels trucked from North Dakota was transported to the primary market of Minneapolis-St. Paul, in 1971-72 almost 4 out of 10 bushels went by this mode in this direction. After eight years of declining importance, the wheat market in Minneapolis-St. Paul regained and surpassed the prominence it held in 1963-64. The two primary markets of Minneapolis-St. Paul and Duluth-Superior received 97.2 percent of all wheat shipped by truck from the state of North Dakota in 1971-72.

In summary, there were two significant occurrences during crop year 1971-72: First, the resurgence and re-establishment of rail as the dominant mode in the transportation of wheat from the state of North Dakota, and secondly, the revival of Minneapolis-St. Paul as a market for wheat transported by truck from the state of North Dakota. While it is too early to say that a new trend has established itself, the volume and percentage changes from previous crop years are significant.

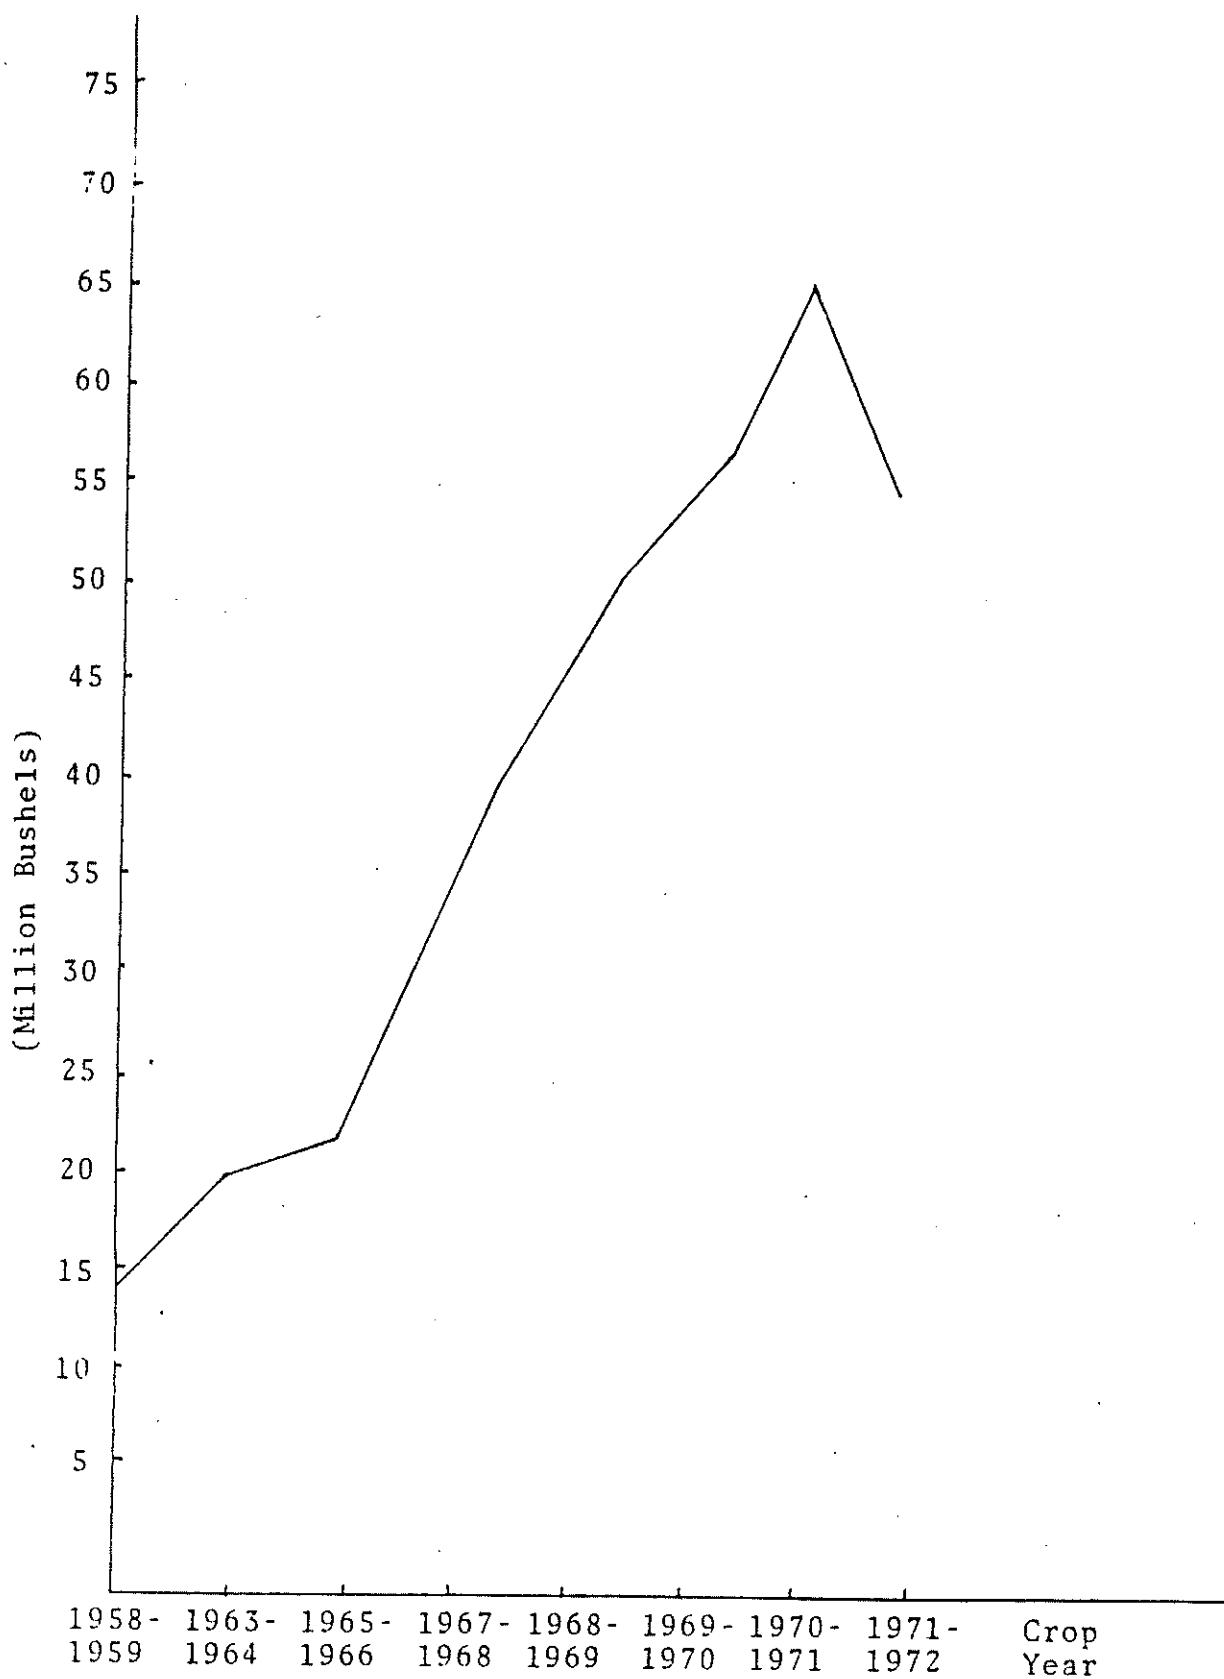

Figure 2. Total Volume of All Wheat Shipped by Truck to All Destinations from North Dakota Country Elevators, 1958-1959 through 1971-72.

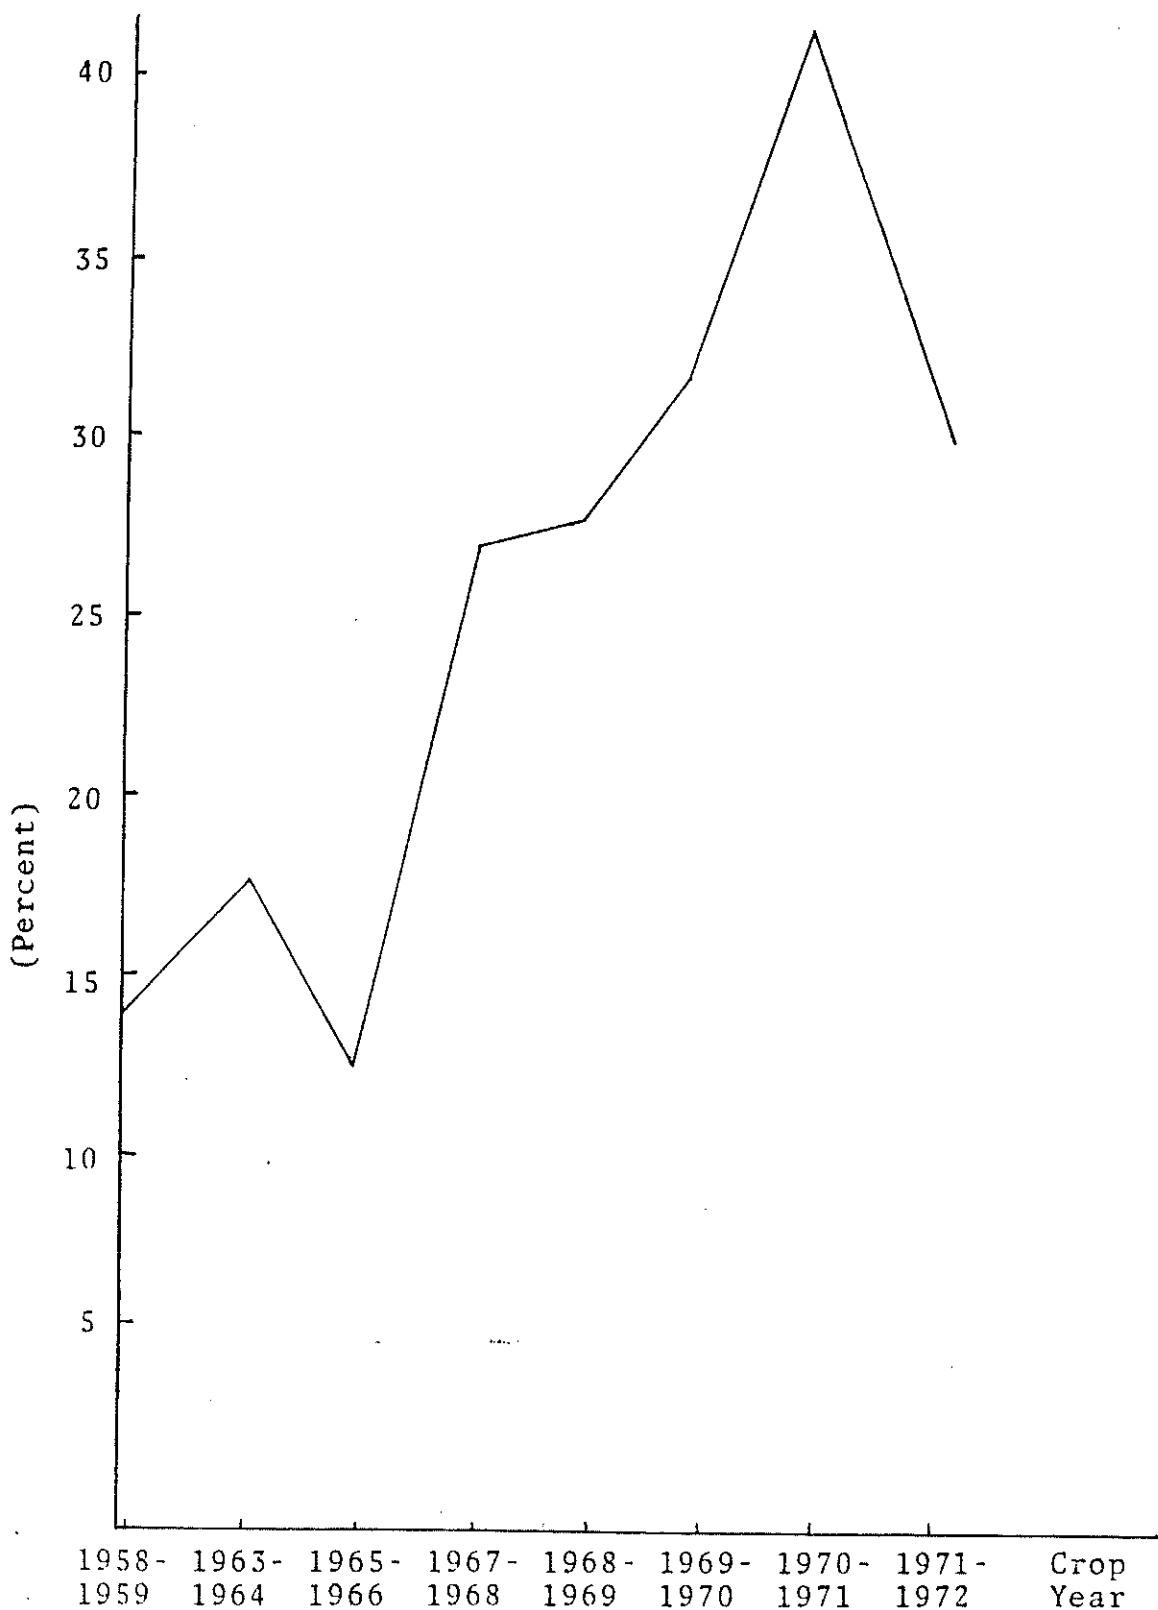

Figure 3. Percent of All Wheat Shipped by Truck from North Dakota Country Elevators, 1958-1959 through 1971-1972.
