EXECUTIVE SUMMARY

In 2005, Congress enacted the Safe, Accountable, Flexible, Efficient Transportation Equity Act – A Legacy for Users (SAFETEA-LU). This highway funding legislation created a new Section 5311c program, which provided funding for Indian tribes and the provision of public transit programs serving small urban and rural (other than urbanized) areas with populations of under 50,000.

This study provides transit-related demographic information concerning the 332 federally recognized Indian tribes in the lower 48 states. Quantifying related needs is an essential component of designing and carrying out public policy related to the new 5311c program.

This demographic data and corresponding mobility needs are analyzed in an attempt to identify areas with large populations or high concentrations of residents who are traditionally considered to be mobility dependent and therefore in need of transit services. The study then compares these areas with a list of tribes that received funding under the new tribal transit Section 5311c program.

All of this study's analysis of demographic data related to mobility dependence is based on small urban and rural populations. Urbanized populations were not considered since the focus of the Section 5311c tribal transit program is, by definition, non-metropolitan.

A review of census data indicates that Indian tribes and reservations are highly dissimilar. Reservations vary greatly in terms of their geographic size, their populations, and their population densities. There are also significant differences in the size of what are traditionally considered mobility-dependent subpopulations.

In terms of size, several reservations are larger than some states, but nearly one-third of all reservations cover less than one square mile. Ten reservations have over 50,000 residents, but the vast majority (256) has fewer than 5,000 residents. Reservation population densities vary greatly, but many of the most densely populated reservations are geographically small. Some reservations are located in or at least partially within metropolitan areas, but most are predominantly small urban and rural.

This study compares and interprets census data related to population subgroups that are traditionally mobility dependent. These subgroups include senior citizens, disabled and low income individuals, school age youth, and households without vehicles. Related demographic assessments are made based on both the actual size of related populations and on the percentage size of each subgroup compared to a reservation's total population.

Taken as a whole, reservations tend to mirror the nation in terms of the size of various mobility-dependent subgroups. Certain reservations do, however, greatly exceed national averages. For example, 16.3% of all U.S. residents are age 60 or over. There are, however, 31 reservations where 20% or more residents are seniors. Similar variances are observed relative to residents with disabilities.

More drastic differences are observed, however, relative to low income, school age, and households with vehicle populations. Regarding low income populations, 12% of all U.S. residents are considered low income; the average for all Indian reservations is 17.3%. Eighteen of the reservations identified in this study have low income populations of 40% or higher.

Concerning school age youth between the ages of five and 19, 20.4% of all U.S residents fall within this age range. The average of all the reservations in the lower 48 states is comparable at 22.4%. There are, however, 30 reservations where one-third of all residents are school age.

Regarding households without vehicles, 10.3% of all U.S. households do not own an automobile. Despite relatively high poverty levels, only 7.8% of all reservation households in the lower 48 states do not own a motor vehicle. This discrepancy may be related to the highly rural nature of many reservations and the lack of public transportation services. Of 29 reservations in the lower 48 states, 15% or more of all households do not own a motor vehicle.

In terms of the actual size of the various subgroups listed above, there is a high correlation between a reservation's total population and the size of each mobility-dependent subgroup. Not surprisingly, high population reservations have more mobility-dependent residents.

Because of the vast differences in geographic size, population, and population density, comparing reservations based on population and population percentages produce starkly different rankings. It may, therefore, be appropriate to consider both approaches when attempting to make actual assessments of an individual reservation's transit needs or when attempting to compare the needs of one reservation with those of others.

Using census data related to what are traditionally considered mobility-dependent subpopulations, this study attempts to identify Indian reservations with the greatest mobility needs. These rankings are compiled on both an aggregate number and a percentage of population basis. These rankings are then compared to the list of tribes and reservations that received funding during the first year of the Section 5311c tribal transit program.

This comparison reveals that many of the most need-intensive reservations did, in fact, receive first year 5311c tribal transit funding. However, several tribes and reservations with very small non-metropolitan populations also received 5311c funding. It appears that in two instances, reservations with no small urban or rural residents received program funding.

Given the subjective nature of determining mobility needs, it would be inappropriate to discredit the FTA for not funding applications strictly from highly-ranked tribes. Related discrepancies may, however, illustrate that it may be appropriate to consider related demographic data when making future assessments. It may be especially appropriate to give considerable weight to each reservation's small urban and rural, non-metropolitan population during the review process since that is, in fact, the focus of the 5311c program.

1. INTRODUCTION

This study is designed to help identify non-metropolitan, small urban and rural Indian tribes and reservations that have the most significant transit needs. The basis for this determination is an examination of traditional mobility need indicators such as senior citizens, people with disabilities, low income populations, school-age youth, and households without vehicles. Quantifying related needs is an essential component of designing and carrying out public policy related to mobility-enhancing transit programs.

The federal government recognizes 561 tribal entities that are eligible to received funding and services from the Bureau of Indian Affairs by virtue of their status as Indian tribes (70 FR 71194). Of these 561 tribes, 332 are located in the lower 48 states. The remaining 229 are in Alaska.

This study focuses on federally recognized tribes that are located in the lower 48 states. Alaska's 172,000 native residents live in relatively small villages, both in terms of population and land area. The vastness of the state and the remoteness of many of these villages may make it inappropriate to categorize them along with Indian tribes in other portions of the United States. Their situations may warrant separate study.

The Safe, Accountable, Flexible, and Efficient Transportation Equity Act: A Legacy for Users (SAFETEA-LU) provides funding for Indian tribes to provide transit services in non-metropolitan, small urban and rural areas. This study will focus on reservations that are, by definition, at least partially small urban and rural. As such, they are located, in whole or in part, in non-metropolitan areas that have less than 50,000 residents. As prescribed by federal law, these reservations are eligible to receive Federal Transit Administration (FTA) funding that is reserved for non-metropolitan, small urban and rural areas. These funding sources are generally referred to as Section 5311 programs, some of which are available for use exclusively by Indian tribes (5311c).

This study does not differentiate between Oklahoma's tribal statistical areas and traditional Indian reservations. Even though there are some historic and technical differences, these differences are considered insignificant for the purposes of this study.

This report is divided into six chapters. Following this introductory chapter, this report includes the following chapters:

- Reservation Populations, Land Areas, and Population Densities
- Demographic Need Indicators
- Comparisons Demographic Need Indicators vs. FTA Tribal Transit Grantees
- Summary and Recommendations

Following an introductory paragraph, Chapters 2-5 each contain a section which, in a bullet format, summaries that chapter's highlights. This presentation is intended to give readers a preview of the contents of the chapter and to make it easier to refer back to the proper chapter to located desired information.

It is hoped this study will provide information that will further facilitate the effective expenditure of federal transit monies dedicated to tribal transit in non-metropolitan areas. It is important to note, however, that such expenditures cannot be made strictly on the outcome of statistical analysis. Such analysis may provide guidance to the deliberative process, but ultimately, such decisions must be based on each tribe's unique situation and subsequent subjective determinations. The analytical analysis

provided by this study may, however, assist policy makers in their deliberations and help them focus on areas of greatest need and potential benefits.

The preparation of traditional transit development plans typically involves a gap analysis. This analysis consists of a comparison of local mobility needs versus available means of personal transportation and the development of recommendations aimed at satisfying unmet needs.

Need identification is the most difficult component in this process. Some needs can be identified via a review of demographic data, but some are far more difficult to quantify and involve approaches such as citizen and user surveys, interviews with advocacy groups and social service providers, public input meetings, etc.

The artful and subjective nature of much of the need identification process requires that it be done on a case-by-case basis. It is important, however, that this process not overlook mobility-related demographic information.

This study focuses on demographic data that is often the starting point of need identification. While this study's findings should not be the final word on areas of greatest need, they will hopefully be a valuable tool in determining where future transit monies should be expended.

2. RESERVATION POPULATIONS, LAND AREAS, AND POPULATION DENSITIES

2.1 Introduction

An area's transit needs and the ease or difficulty associated with providing related services is closely linked to the area's geographic size, its population, and population density. Like states, Indian reservations are very diverse in terms of their geographic size, population, and population density. Many reservations are less than one square mile in size while others have land areas of several thousand square miles. Similarly, some reservations have large populations while others are quite small. Population densities also vary greatly from one reservation to another. Each of these factors may impact the need for and the ability to provide transit services to reservation residents.

This chapter presents and analyzes population, land area, and density information on Indian reservations in the lower 48 states. While this information is not necessarily reflective of the need for transit services, it does have a bearing on the ease or difficulty of providing such services.

This chapter's discussions concerning population densities will include a determination concerning the metropolitan vs. small urban and rural nature of each reservation. This determination is crucial since Section 5311 and 5311c transit funding is not, by definition, available to metropolitan areas.

Before proceeding further, it should be noted that the Census Bureau does not publish decennial data for approximately 24 federally-recognized tribes in the lower 48 states. This lack of data may be tied to a tribe's lack of land or the fact that the tribe became recognized after the most recent census. Whatever the case, the analysis in this and subsequent chapters is limited to tribes for which the U.S. Census Bureau compiles demographic data. Tribes that are not a part of the Census Bureau's demographic data base are identified in Appendix A. Tribes that are in the Bureau's extensive data base are identified, along with related demographic information, in Appendix B. Appendix C presents a narrative description of the column headings used in Appendix B.

It should also be noted that some tribes in Appendix B share lands with other tribes and, in some cases, tribes are listed more than once because they have multiple reservations. The data on tribes with shared reservations is identical for each tribe that is domiciled on that particular reservation; in some instances this may involve several tribes. For these reasons, the number of tribes listed in Appendix B does not coincide with the number of federally-recognized tribes.

2.2 Chapter Highlights

- The Census Bureau collects detailed demographic data concerning reservations.
- Of all reservations, 29.3% are less than one square mile in size.
- Twenty-four reservations are larger than the state of Rhode Island.
- The largest reservations, in terms of land area, tend to be in the Midwest and southwestern states.
- Six reservations have more than 100,000 residents.
- Several of the most populated reservations are located in Oklahoma.
- Two hundred fifty-six reservations have fewer than 5,000 residents.
- There are wide variations concerning population densities on reservations.
- Six reservations are located totally within metropolitan areas.
- Forty-seven reservations are located partially within metropolitan areas.

2.3 Geographic Size

As indicated earlier, many reservations are extremely small and have land areas of less than one square mile. Conversely, some reservations have land areas larger than some states. These factors and each reservation's location relative to medical and social services, shopping, employment opportunities, etc. impact the way transit services are provided.

Appendix B identifies each of the federally-recognized Indian entities in the lower 48 states for which census data is collected and includes data concerning their physical size. A review of this data highlights the fact that it is inappropriate to stereotype reservations in terms of their size. In fact, the reservations listed in Appendix B range in size from less than one square mile to over 22,000 square miles.

Table 2.1 stratifies reservations into categories based on their surface areas. As this table indicates, nearly 30% of all Indian reservations in the lower 48 states have a land area of less than one square mile, and nearly 20% have less than 10 square miles; another 21% of all reservations have between 10 and 100 square miles of land area. On the other end of the spectrum, nearly 20% of all reservations have land areas between 100 and 1,000 square miles, and over 10% have land areas in excess of 1,000 square miles.

Table 2.1 Reservation Land Areas

Square Miles	# of Reservations	% of Reservations
Less than 1	106	29.3%
1 – 9.99	69	19.1%
10 - 49.99	52	14.4%
50 - 99.99	23	6.4%
100 - 499.99	53	14.6%
500 - 999.99	18	5.0%
1,000 or more	41	11.3%

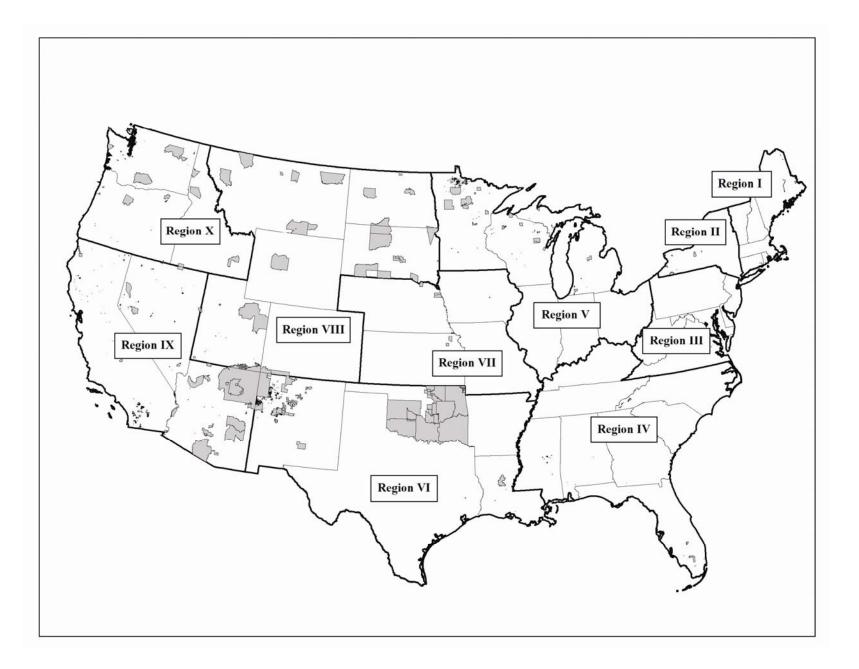

As noted earlier, the reservation listing in Appendix B and the related presentations in Table 2.1 include data on over 360 reservations, well in excess of the 332 federally-recognized tribes in the lower 48 states. This occurs because several tribes have multiple, disconnected land tracts and because some tribes share reservation areas with other tribes. The lists in Appendix B and corresponding presentations herein are based on each of these individual and shared tracts of land; this is also the manner in which they are presented by the U.S. Census Bureau.

Table 2.2 identifies the nation's largest Indian reservations and compares their size to the smallest states. As this table illustrates, each of the 24 reservations listed covers more square miles than the state of Rhode Island. The nation's largest reservation, the Navajo Nation in Arizona, New Mexico, and Utah, is larger than each of the nine states listed. As Table 2.2 illustrates, the nation's largest reservations tend to be in the midwest and southwestern states.

Table 2.2 Land Area Comparisons

Reservation / State	Total Square Miles
Navajo Nation (AZ, NM, & UT)	22,174
Maryland	12,407
Hawaii	10,932
Choctaw Nation (OK)	10,613
Massachusetts	10,555

Confederated & Yakima (WA)	2,153
Confederated Tribes (WA)	2,117
Flathead Reservation (MT)	1,938
Hualapai Reservation (AZ)	1,590
Rhode Island	1,545

Figure 2.1 presents a national map that illustrates where Indian reservations are located within the lower 48 states. This map also identifies the Federal Transit Administration's ten administrative regions. This map also shows the number of reservations in each region and the average size of those reservations.

igure 2.1 Reservation Locations and FTA Regions

Table 2.3 presents a further analysis of the number and size for reservations by FTA region. As this table and Figure 2.1 illustrate, reservations in the eastern United States are relatively few in number and small in size while midwest and southwestern reservations tend to be larger and more plentiful. Pacific coast states have a significant number of reservations, but they are relatively small compared to their midwest and southwestern counterparts. As Table 2.3 indicates, 13 reservations straddle FTA regional boundaries.

FTA Region	Number of Reservations	Cross Boundary Reservations	Total Area (Sq. Miles)	Average Size (Sq. Miles)
1	7	0	58	8
2	9	0	231	26
3	0	0	0	0
4	8	0	249	31
5	35	0	4,908	140
6	63	3	64,370	1,021
7	9	0	1,063	118
8	28	3	44,033	1,573
9	142	5	32,947	232
10	43	2	9,346	217
Total	344	13	157,205	457

Table 2.3 Reservation Locations and Land Areas

As indicated earlier, the geographic size of a reservation is not necessarily indicative of its residents' need for transit services. It may, however, impact the ease or difficulty of providing such services. Very large reservations may experience significant challenges when it comes to designing and operating transit systems. Similarly, small reservations may face similar difficulties if they are located a long distance from regional centers that are their primary source of medical and social services, shopping, employment, etc.

2.4 Population

As is the case with land area, there are wide variations regarding reservation populations. By national standards, however, reservations tend to have relatively few residents. According to the 2000 census, only 36 reservations have populations of more than 10,000 people, and only eight have more than 100,000 residents. By comparison, there are 238 cities in the United States that have more than 100,000 residents.

Table 2.4 identifies the eight reservations that have over 100,000 residents. It should also be noted that these population totals include both native and non-native residents.

Table 2.4 Largest Reservation Populations

Reservation	Population
Muscogee-Creek Nation (OK)	704,565
Cherokee Nation (OK)	462,327
Chickasaw Nation (OK)	277,416
Choctaw Nation (OK)	224,472
Kiowa-Comanche-Apache-Fort Sill Apache OTSA (OK)) 193,260
Cheyenne-Arapaho (OK)	157,867
Navajo Nation (AZ, NM, UT)	155,214
Citizen Potawatomi Nation (OK)	106,624

The population of Indian reservations declines rapidly from those listed in Table 2.4. As Table 2.5 illustrates, the vast majority of Indian reservations has fewer than 5,000 residents, and only 10 have more than 50,000 residents. By comparison, in 2000 there were 601 cities in the United States with over 50,000 residents.

Table 2.5 Reservation Populations

Reservation Population	# of Reservations
100,000 or more	8
50,000 to 99,999	2
25,000 to 49,999	9
10,000 to 24,999	32
5,000 to 9,999	29
Less than 5,000	256

As is the case with geographic size, reservation populations are not necessarily indicative of mobility needs. Resident numbers do, however, ultimately influence system designs and operating costs.

2.5 **Population Density**

Population density is perhaps more important than either the geographic size or overall population when it comes to the provision of transit services. As was the case with previous discussions, Indian reservations cannot be stereotyped in terms of population density.

As indicated in the previous sections, the Navaho Nation is the country's largest, and one of the most populated, reservations. It is also important to note, however, that it has a population density of only seven residents per square mile. This density is not unlike many of the large reservations discussed earlier. This occurrence presents some significant challenges when it comes to the provision of transit services.

Table 2.6 presents population density information on the nation's largest Indian reservations, both in terms of land area and population, and compares them with select states. As this table illustrates, in many instances large reservations have population densities similar to sparsely populated states. Even the majority of the most populated Indian reservations have population densities comparable to relatively rural states.

Reservation / State	Area (sq. mi.)	Pop. / sq. mi.
Geographically Large Reservations		
Navajo Nation (AZ, NM, & UT)	22,174	7
Choctaw Nation (OK)	10,613	21
Cherokee-Arapaho Nation (OK)	8,121	19
Chickasaw Nation (OK)	7,285	38
Ute Tribe (UT)	6,768	3
Cherokee Nation (OK)	6,702	69
Kiowa-Comanche-Apache-Fort Si	ill	
Apache OTSA (OK)	6,360	30
Creek Nation (OK)	4,678	152
Tohono O'odham Tribe (AZ)	4,453	2
Cheyenne River Sioux (SD)	4,260	2
Standing Rock Sioux (ND & SD)	3,572	2
Crow Tribe (MT)	3,562	2
Wind River (WY)	3,465	7
Fort Peck (MT)	3,289	3
Pine Ridge (SD & NE)	3,159	5 3 5 3
San Carlos Apache (AZ)	2,911	3
Fort Apache (AZ)	2,628	5
Hopi Reservation (AZ)	2,531	3
Blackfeet Reservation (MT)	2,371	4
Osage Nation (OK)	2,251	20
Confederated & Yakima (WA)	2,153	15
Confederated Tribes (WA)	2,117	4

 Table 2.6 Population Density Comparisons

Table 2.6 continued

Most Populated Reservations		
Creek Nation (OK)	704,565	152
Cherokee Nation (OK)	462,327	69
Chickasaw Nation (OK)	277,416	38
Choctaw Nation (OK)	224,472	21
Kiowa-Comanche-Apache-Fort Sill		
Apache OTSA (OK)	193,260	30
Cheyenne-Arapaho (OK)	157,867	19
Navajo Nation (AZ, NM, UT)	155,214	7
Citizen Potawatomi Nation (OK)	106,624	96
Select States		
Alaska	571,951	1
Wyoming	97,100	5
North Dakota	68,976	9
Nebraska	76,872	22
Maine	30,862	41
Vermont	9,615	66
Kentucky	39,728	102
North Carolina	48,711	165

As indicated earlier, over 100 of the federally-recognized tribes in the lower 48 states have land areas of one square mile or less. A review of the data in Appendix B indicates these are typically the reservations that have the highest population densities.

Conversely, only three of the Indian tribes that have land areas greater than one square mile have a population density that approaches that of cities with populations in the 40,000-50,000 range. These tribes and a sampling of representative cities are presented in Table 2.7.

 Table 2.7 Densely Populated Reservations vs. Medium Size Cities

Reservation / City	Population	Area (sq. Mi.)	Pop. / sq. mi.
Littleton, CO	40,340	13.5	2,984
Manhattan, KS	44,831	15.0	2,984
Apple Valley, MN	45,527	17.1	2,625
Olympia, WA	42,514	16.7	2,544
Bismarck, ND	55,532	26.9	2,065
Middleton, OH	51,605	25.7	2,011
Pascua Yaqui Tb. (Tucson)	3,315	1.9	1,777
Puyallup Tribe (Tacoma)	41,335	28.5	1,449
Flagstaff, AZ	52,894	63.6	832
Enid, OK	47,045	73.8	636
Suquamish Tribe (Seattle)	6,536	11.7	559
Palm Springs, CA	42,807	94.3	454

Based upon the fact that even the most densely populated reservations, with land areas in excess of one square mile, have population densities less than cities with approximately 50,000 residents, it seems appropriate that Congress chose to treat them in a manner consistent with small urban and rural areas in terms of transit funding.

Table 2.8 categorizes Indian reservations based on their population density. As this table illustrates, 24 reservations have 1,000 or more residents per square mile and another 23 have between 500 and 999 residents per square mile. Another 87 reservations have between 100 and 499 residents per square mile. As discussed earlier and as presented in Appendix B, more densely populated reservations tend to have relatively small land areas.

Table 2.8 Reservation Population Densities

Residents / Sq. Mile	# of Reservations.
1,000 or more	24
500 to 999	23
100 to 499	87
50 to 99	42
25-to 49	35
10 to 24	52
5 to 9	32
Less than 5	42

As discussed earlier, 5311c tribal transit funding is not available for use to provide service strictly within a metropolitan area. Using the data presented in Appendix B and map overlay techniques, SURTC researchers determined that there are only six reservations in the lower 48 states that are strictly metropolitan in nature. These tribes and reservations are identified in Table 2.9.

Table 2.9 Metropolitan Tribes and Reservations

Reservation (Location)
Coconut Creek Reservation (Florida)
Hollywood Reservation (Florida)
Seminole Trust Land (Florida)
Tampa Reservation (Florida)
Redding Rancheria (California)
Yavapai-Prescott Reservation (Arizona)

In addition to the reservations identified in Table 2.8, another 47 reservations in the lower 48 states are partially located in metropolitan areas. The non-metropolitan areas of these reservations are eligible for funding under the 5311c tribal transit program. Their proximity to a metropolitan area may impact the type of transit services that they require and the amount of coordination that is possible with other local service providers. These partially metropolitan reservations are identified in Appendix B.

Other than the previously discussed metropolitan and partially metropolitan reservations, all the reservations listed in Appendix B are situated entirely in small urban and rural areas. As is the case with non-Indian small urban and rural areas, some of their transit needs include local transportation while others involve travel to the nearest regional center for medical and social services, employment, shopping, etc. In some cases, these regional centers may be located over 100 miles away from the reservation.

The following chapter uses census data to identify reservations with high concentrations of subpopulations that are traditionally transit dependent. This data may be a useful determinant when it comes to selecting recipients of scarce tribal transit funds.

3. DEMOGRAPHIC NEED INDICATORS

3.1 Introduction

As indicated in the preceding chapters, there are 332 federally-recognized Indian tribes in the lower 48 states. The U.S. Census Bureau compiles census data on the vast majority of these reservations. This chapter presents demographic information on reservations, primarily concerning factors that are traditionally associated with mobility-dependent segments of the population.

At the outset, it should be noted that, in most instances, a reservation is synonymous with a particular tribe, and the data presented in Appendix B relates to one tribe and its reservation. In some cases, however, tribes have multiple reservations and in other instances, two or more tribes share a single reservation. It should also be noted that the data in Appendix B is limited to reservations and does not include off-reservation tribal members and tribal lands.

Each reservation will be ranked compared to all other reservations in each of the population segments discussed in this chapter. Aggregate mobility dependent rankings will be determined by combining each reservation's ranking in each of the categories discussed.

It is important to recognize that the needs indicators discussed in this chapter are not synonymous with unmet needs or ridership that might actually result if transit services are provided. Concerning needs indicators vs. unmet needs, this chapter's needs analysis looks strictly at census data concerning population subgroups that traditionally require transit services. It does not, however, consider transit services that might actually be in place. To the extent that some tribes are already providing transit services, the potential needs identified in this chapter may already have been satisfied.

It is also important to note that identified needs do not necessarily translate into actual demand and ridership. The mobility dependent populations identified in this chapter should not, therefore, be considered as a surrogate for system users. They are, however, an important starting point in identifying mobility needs, demands for service, and eventual ridership. Related federal Transit Research Cooperative Program studies have been undertaken and are ongoing.

Finally, it should also be noted that the subgroup populations identified in this chapter cannot be combined to determine the actual size of each reservation's mobility dependent population. This limitation results since many individuals may be a part of multiple subgroups (e.g. a low income, disabled senior citizen without an automobile). It is, however, assumed that such occurrences may be observed universally and that tribe-to-tribe comparisons still produce valid comparisons of need within the universe of tribes.

3.2 Chapter Highlights

- Mobility-dependent populations traditionally include senior citizens, disabled individuals, low income individuals, school age youth, and households without automobiles.
- Mobility needs analysis may consider both aggregate populations and relative percentages.
- There is a high correlation between aggregate population and the size of each mobility dependent subgroup.
- Taken as a whole, reservations tend to mirror the nation in terms of the size of various mobility dependent subgroups. Certain reservations do, however, greatly exceed national averages.

• There is a stark difference in outcomes if need determinations are based on aggregate populations or on a percentage of population basis. It may, therefore, be appropriate to give consideration to both approaches.

3.3 Mobility Dependent Populations

Certain segments of the population are typically more inclined to be mobility impaired and therefore transit dependent. These segments include the following:

- Senior citizens (age 60 and over)
- Disabled persons
- Low income persons
- School age youth (ages 5-19)
- Households without automobiles

The U.S. Census Bureau compiles related data on various geographic areas, including Indian reservations. Appendix B identifies each of the Indian reservations in the lower 48 states and presents corresponding census data concerning each reservation's population in each of the population subgroups listed above.

As indicated earlier, no attempt is made to sum the various subpopulation data in Appendix B in an attempt to determine a total population of mobility-dependent residents on each reservation. Doing so would be inappropriate since many individuals may be included in multiple categories and because not all of the individuals reflected in each category are mobility impaired. It is assumed that such occurrences occur universally and that reservation comparisons are, therefore, appropriate.

Using the population data presented in Appendix B, each reservation is ranked in each category relative to all the other reservations. These individual rankings are then compiled to develop aggregate rankings that are summed to identify which reservations have the largest populations of mobility-impaired residents.

The comparisons presented in the remaining subsections of this chapter are compiled on both an actual population and a percentage basis. Presenting information on strictly a population basis would naturally highlight the needs of the reservations with the largest populations. Conversely, basing comparisons strictly on percentages might skew rankings toward reservations with relatively small populations but high percentages within certain subgroups. It is therefore deemed appropriate to consider both actual populations and population percentages.

It should be noted that reservations that receive relatively low rankings are not necessarily without needs. This assessment merely suggests that demographic conditions are right on certain reservations to suggest that their needs may be more significant.

As indicated earlier, it should also be noted that this analysis does not suggest that residents' mobility needs are going unmet if a reservation is highly ranked in any of the categories present. In some instances, reservations may have transit services in place that are satisfying many of these residents' mobility needs.

Before proceeding with a review of mobility-related demographic data, it should also be noted that the analysis presented in the following subsections is based on census data that pertains strictly to Indian reservations and Oklahoma Tribal Statistical Areas. In many instances, however, tribes have trust land located outside a statistical area or a reservation's geographic boundaries. Some of this land may be

located contiguous to or otherwise near the statistical area or reservation, but in some cases it may be hundreds of miles away.

Table 3.1 identifies Indian tribes that have off-reservation tribal trust lands with more than 500 residents. As indicated above, in some instances these lands and residents may be located very near their corresponding reservation. In such instances, these residents might utilize tribal transit services.

 Table 3.1 Off-Reservation Trust Lands – Populations Exceeding 500

Reservation (State)	Land Area (sq. mi.)	Population
Grand Traverse (MI)	1	545
Mississippi Choctaw (MS)	8	879
Navajo Nation (AZ, NM, & UT)	1,904	25,248
Nooksack (WA)	4	547
Pine Ridge (SD & NB)	310	1,453
Rock Boy's (MT)	83	1,071
Rosebud (SD)	582	1,419
Sault Ste. Marie (MI)	1	1,322
Turtle Mountain (ND, SD, & MT)	165	2,516

Including off-reservation residents in the calculations discussed in the remainder of this chapter would alter related tribal need rankings. However, since it is impossible to readily determine the location of these lands relative to each reservation, the determination was made to use strictly census data that was specific to reservations and not to include tribal trust land residents. In cases such as the Turtle Mountain Reservation in north central North Dakota, where most off-reservation trust lands are immediately adjacent to the reservation, including these populations would have moved the reservation up significantly in several rankings.

3.3.1 Population vs. Population Percentages

Appendix B contains an extensive data base on Indian tribes and reservations. This database includes demographic information related to both total populations and the size of the various subgroups discussed earlier. Statistical analysis of this data shows there is a very high correlation between total population and the size of each subgroup. Therefore, reservations with the largest populations would expectedly have the largest numbers of senior citizens, disabled residents, etc.

Based on these correlations and the fact that these subgroups typically have the greatest needs for transit services, it would be relatively easy to distribute scarce transit assistance funds if the goal was to give it to tribes and reservations with the most transit dependent residents – the FTA would simply grant the money to the reservations with the most residents. This approach would not, however, be fair to tribes and reservations that have smaller populations but significantly higher relative concentrations of transit dependent residents.

It is, therefore, appropriate to identify transit dependent populations based on both aggregate numbers and as a percentage of the total population. Given the correlation that exists between total population and the number of seniors, disabled, etc., this chapter will not go into further discussions concerning the size of these subgroups on various reservations. Suffice it to say that, in most instances, the most populous reservations have the largest populations of what are traditionally considered transit dependent subpopulations.

The remaining sections of this chapter will, therefore, be devoted to identifying reservations that have the greatest concentrations, on a percentage basis, of transit dependent subpopulations. This information, in concert with actual total populations, may be helpful when identifying appropriate recipients for scarce tribal transit monies.

Prior to ranking reservations based on the percentage size of various transit dependent subpopulations, it should be pointed out that SURTC researchers made a subjective decision to limit ranking considerations based on non-metropolitan, small urban and rural populations (vs. total population). This determination was made given the fact that FTA 5311c monies are intended for use related to the provision of transit services that benefit of non-metropolitan areas.

It was also decided that ranking considerations would be dependent on a reservation having at least 500 small urban and rural residents. Approximately 180 reservations have at least 500 small urban and rural residents.

A similar analysis was also run based on as few as 250 small urban and rural residents, but in some cases, the number of residents in some categories was so small that a change of only a very limited number of residents in any category would result in significant changes in related percentage rankings.

Limiting consideration based on the number of small urban and rural residents was also justified by the fact that small transit systems need a critical mass of residents to justify their existence. This is not to say that such small populations are without transit needs, but it may be more appropriate to address these needs with nontraditional approaches such as friends and family ridesharing or vanpooling.

With these qualifiers in mind, the following subsections rank reservations based on the percentage size of various transit-dependent subpopulations. In each case, the top 25 reservations in terms of percentage concentrations are listed. Each listing also includes the actual number of related residents on each reservation. As eluded to earlier, some very small reservations rank quite highly on various lists. Even a change of only a few residents would have a significant impact on such a reservation's percentage ranking. Therefore, a cut-off of even more than 500 small urban and rural residents might be worthy of consideration.

3.3.2 Senior Citizen Populations

SURTC researchers analyzed the data in Appendix B to identify which reservations, on a percentage basis, have the most senior citizen residents. The reservations with the highest concentrations of seniors are identified in Table 3.2.

As Table 3.2 indicates, at least 20% of the population of each of the reservations listed is 60 years of age or older. The average size of the senior population for all the reservations listed in Appendix B is 17.0%, a size that is quite comparable to the national average of 16.3%.

Some reservations listed in Table 3.2 have sizable senior populations, but many are relatively small. As indicated earlier, a reservation needed to have a small urban and rural population of at least 500 to be considered in this comparison.

 Table 3.2
 Concentrations of Senior Citizens

Reservation (State)	Senior Population	% Seniors
1. Agua Caliente Band of Cahuilla (CA)	10,310	48%
2. Cocopah Tribe (AZ)	484	47%
3. Swinomish Indians (WA)	936	35%
4. Seneca-Cayuga Tribe (OK)	1,218	30%
5. Peoria Tribe of Indians (OK)	1,316	27%
6. Mille Lacs Band of Chippewa (MN)	1,188	26%
7. Samish Indian Tribe (WA)	8,601	26%
8. Fort Mojave Indian Tribe (AZ)	206	25%
9. Aroostook Band of Micmac Indians (ME)	2,347	24%
10. Miami & Peoria Tribes (OK)	1,039	24%
11. Muscogee (Creek) & Seminole Area (OK)	492	23%
12. Kickapoo Tribe (KS)	1,019	23%
13. Lac du Flambeau Chippewa (WI)	663	22%
14. Nez Perce Tribe (ID)	3,955	22%
15. Seminole Nation (OK)	4,912	22%
16. Kaw Nation (Kaw OTSA –OK)	1,317	22%
17. Kaw & Ponca (Joint Use – OK)	5,977	21%
18. Pueblo of Cochiti (NM)	322	21%
19. Keweenaw Bay Indian Community (MI)	744	21%
20. Pueblo of Taos (NM)	940	21%
21. Chickasaw Nation (OK)	57,629	21%
22. Sisseton-Wahpeton Oyate (SD)	2,140	21%
23. Seneca Nation (NY)	1,397	21%
24. Choctaw Nation (OK)	45,938	20%
25. Stockbridge Munsee Community (WI)	312	20%
26. Yurok Tribe (CA)	225	20%
27. Sac & Fox Nation (OK)	11.342	20%
28. Caddo, Delaware, & Wichita and Affiliated Tribes ((OK) 2,901	20%
29. Colorado River Indian Tribes (CO)	1.818	20%
30. Pawnee Nation (OK)	3.259	20%
31. White Earth Band of Chippewa (MN)	1,803	20%

3.3.3 Disabled Populations

SURTC researchers also analyzed the data in Appendix B to identify which reservations, on a percentage basis, have the most disabled residents. The reservations with the highest concentrations of disabled individuals are identified in Table 3.3.

All reservations listed in Table 3.3 have disabled populations of at least 8%. This compares to a national average of 7.7%. On an aggregate basis, all the reservations listed in Appendix B have a disabled population of 6.2%. As indicated earlier, a reservation needed to have a small urban and rural population of at least 500 to be considered in Table 3.3's comparison.

Table 3.3 Concentrations of Disabled Individuals

Reservation (State)	Disabled Population	% Disabled
1. Seminole Tribe (Brighton – FL)	116	20%
2. Pueblo of Sandia (NM)	772	17%
3. Crow Creek Tribe (SD)	372	17%
4. Tohono O'odham Nation (AZ)	1,246	12%
5. White Mountain Apache (AZ)	1,438	12%
6. Miami & Peoria Tribes (OK)	480	11%
7. Torres Martinez Desert Cahuilla Indians (CA)	437	11%
8. Cocopah Tribe (AZ)	108	11%
9. Ottawa Tribe (OK)	636	10%
10. Agua Caliente Band of Cahuilla Indians (CA)	1,985	9%
11. Pueblo of Santo Domingo (NM)	285	9%
12. Seminole Nation (OK)	2,016	9%
13. Quapaw Tribe (OK)	643	9%
14. Pueblo of Picuris (NM)	151	8%
15. Eastern Band of Cherokee (NC)	677	8%
16. Confederated Tribes of Yakima (WA)	2,626	8%
17. Hualapai Indian Tribe (AZ)	112	8%
18. Navajo Nation, Arizona (NM & UT)	12,817	8%
19. Choctaw Nation (OK)	18,402	8%
20. Iowa Tribe (OK)	491	8%
21. Yurok Tribe (CA)	88	8%
22. Otoe-Missouria Tribe (OK)	62	8%
23. Santa Rosa Indian Community (CA)	41	8%
24. Mississippi Band of Choctaw (MS)	338	8%
25. Jena Band of Choctaw (LA)	4,661	8%
26. Muscogee - Seminole (Joint Use - OK)	163	8%
27. Quechan Tribe of Fort Yuma (AZ & CA)	184	8%
28. Aroostook Band of Micmac (MA)	750	8%

3.3.4 Low Income Populations

The data in Appendix B was also analyzed to identify which reservations, on a percentage basis, have the largest low income populations. The reservations with the highest concentrations of low income individuals are identified in Table 3.4.

Table 3.4 Concentrations of Low Income Individuals

Reservation (State)	Low Income Pop.	% Low Income
1. Crow Creek Sioux (SD)	1,220	55%
2. Oglala Sioux (SD)	7,234	51%
3. San Carolos Apache (AZ)	4,724	50%
4. Gila River Community (AZ)	5,625	50%
5. Lower Brule Sioux (SD)	653	48%
6. White Mountain Apache (AZ)	5,949	48%
7. Rosebud Sioux (SD)	4,294	47%
8. Sac & Fox of the Mississippi (IA)	288	47%
9. Zuni Tribes (NM)	3,540	46%
10. Northern Cheyenne (MT)	2,025	45%
11. Tohono O'odham Nation (AZ)	4,742	45%
12. Havasupai Tribe (AZ)	223	44%
13. Santa Rosa Indian Community (CA)	227	44%
14. Navajo Nation, Arizona (NM & UT)	65,001	42%
15. Ute Mountain Tribe (CO, NM, & UT)	692	41%
16. Torres Martinez Desert Cahuilla (CA)	1,698	41%
17. Pala Band of Luiseno Mission Indians (CA)	637	40%
18. Hopi Tribe (AZ)	2,702	40%
19. Standing Rock Sioux (ND & SD)	3,256	39%
20. Red Lake Band of Chippewa (MN)	2,024	39%
21. Pueblo of Santo Domingo (NM)	1,225	39%
22. Fort Belknap Indian Community (MT)	1,142	39%
23. Cheyenne River Sioux (SD)	3,229	38%
24. Spirit Lake Sioux (ND)	1,680	38%
25. Turtle Mountain Chippewa (ND)	2,165	37%
26. Passamaquoddy Tribe (ME)	238	37%
27. Chippewa-Cree Indians (MT)	593	37%

All the reservations listed in Table 3.4 have low income populations of at least 37%. The national average is 12% and the average of all the reservations listed in Appendix B is 17.3%, well above the national average. Approximately 80% of all the reservations listed in Appendix B have a poverty level that exceeds the national average.

As with earlier comparisons, a reservation needed to have a small urban and rural population of at least 500 to be considered in this table's comparison.

3.3.5 School Age Youth Populations

Appendix B's data was also used to identify which reservations, on a percentage basis, have the most school-age residents. The reservations with the highest concentrations of school age residents are identified in Table 3.5.

Nationally, 20.4% of all residents are between the ages of 5 and 19. The average of all the reservations listed in Appendix B is 22.4%. Approximately one-third of the total population in each of the reservations listed in Table 3.5 is school age. A reservation needed to have a small urban and rural population of at least 500 to be considered in Table 3.5's comparison.

Table 3.5 Concentrations of School Age Youth

Reservation (State)	School Age Pop.	% Youth
1. Yavapai-Apache Nation (AZ)	284	38%
2. Shoshone-Paiute Tribes of Duck Valley (NV)	482	38%
3. Onondaga Nation (NY)	536	36%
4. Santa Rosa Indian Community (CA)	188	36%
5. Red Lake Chippewa (MN)	1,859	36%
6. White Mountain Apache (AZ)	4,455	36%
7. Passamaquoddy Tribe (ME)	242	36%
8. San Carlos Apache (AZ)	3,329	35%
9. Menominee Indian Tribe (WI)	1,136	35%
10. Chippewa Cree (MT)	562	35%
11. Oglala Sioux (SD)	4,911	35%
12. Sac & Fox Tribe of the Mississippi (IA)	214	35%
13. Mescalero Apache Tribe (NM)	1,089	35%
14. Morongo Band of Cahuilla Mission Indians (CA)	327	34%
15. Forest County Potawatomi Community (WI)	178	34%
16. Northern Cheyenne (MT)	1,502	34%
17. Mississippi Band of Choctaw (MS)	1,448	34%
18. Spirit Lake Sioux (ND)	1,488	34%
19. Gila River Indian Community (AZ)	3,754	33%
20. Port Gamble Indian Community (WA)	233	33%
21. Fort McDowell Yavapai Nation (AZ)	274	33%
22. Fort Belknap Indian Community (MT)	982	33%
23. Rosebud Sioux (SD)	3,001	33%
24. Ho-Chunk Nation (WI)	210	33%
25. Crow Creek Sioux (SD)	729	33%
26. Navajo Nation (AZ, NM, & UT)	50,811	33%
27. Tule River Indian Tribe (CA)	185	33%
28. Lower Brule Sioux (SD)	442	33%
29. Confederated Tribes of Warm Springs (OR)	1,080	33%
30. Bad River Lake Superior Chippewa (WI)	460	33%

3.3.6 Households Without Automobiles

Nationally, approximately 10.3% of all households do not own an automobile. A review of the data in Appendix B indicates that about half of the reservations in the country have no vehicle household populations which exceed the national average, but the average of all the reservations listed in Appendix B is 7.8%, well below the national average.

Table 3.6 identifies the reservations which have the highest percentage of no vehicle households; all are well above the national average. A reservation needed to have a small urban and rural population of at least 500 to be considered in this listing.

 Table 3.6
 Concentrations of No Vehicle Households (NVH)

Reservation (State)	NVH	% NVH
1. Havasupai Tribe (AZ)	97	77%
2. Tohono O'odham Nation (AZ)	867	30%
3. San Carlos Apache Tribe (AZ)	598	27%
4. Ak Chin Indian Community (AZ)	55	25%
5. Hualapai Indian Tribe (AZ)	87	25%
6. White Mountain Apache Tribe (AZ)	759	25%
7. Hopi Tribe (AZ)	456	24%
8. Gila River Indian Community (AZ)	649	24%
9. Lower Brule Sioux Tribe (SD)	82	23%
10. Mescalero Apache Tribe (NM)	185	22%
11. Passamaquoddy Tribe (Indian Township – ME)	52	21%
12. Zuni Tribe (NM)	352	19%
13. Navajo Nation (AZ, NM, & UT)	7,648	19%
14. Tule River Indian Tribe (CA)	28	18%
15. Ho-Chunk Nation (WI)	33	18%
16. Passamaquoddy Tribe (Pleasant Point – ME)	41	18%
17. Ute Mountain Tribe (CO, NM, & UT)	89	18%
18. Seneca Nation (NY)	469	17%
19. Pala Band of Luiseno Mission Indians (CA)	66	17%
20. Pueblo of Jemez (NM)	78	17%
21. Rosebud Sioux (SD)	399	16%
22. Quechan Tribe of Fort Yuma (AZ & CA)	128	16%
23. Aroostook Band of Micmac Indians (MA)	683	16%
24. Chippewa-Cree Indians (MT)	63	15%
25. Red Lake Band of Chippewa (MN)	206	15%
26. Crow Creek Sioux (SD)	83	15%
27. Ottawa Tribe (OK)	362	15%
28. Oglala Sioux (SD)	471	15%
29. Northern Cheyenne (MT)	176	15%

3.3.7 Aggregate Mobility Dependent Populations

The preceding subsections of this chapter have ranked Indian reservations based upon the percentage size of several transit dependent subpopulations. As discussed earlier, it is inappropriate to sum related populations since many individuals may be a part of two or more subgroups.

However, in an attempt to develop an aggregate rank all reservations, SURTC researchers summed the percentage size of each of the five subgroups discussed in the preceding pages and divided the resulting total by five. The resulting percentage is considered a reasonable proxy of each reservation's mobility-dependent population and provides a valid means of comparing one reservation with another.

Table 3.7 presents the findings of this analysis. In addition to identifying, in order, the top 25 reservations, this table also includes the size of each reservation's small urban and rural population.

Table 3.7 Aggregate Mobility Dependent Populations – Percentage-Based Rank

Rank Reservation (State)

SUR Population

1.	Havasupai Tribe (AZ)	503
2.	Tohono O'odham Nation (AZ)	9,192
2.	Crow Creek Sioux Tribe (SD)	2,225
4.	White Mountain Apache Tribe (AZ)	12,429
4.	San Carlos Apache Tribe (AZ)	9,385
6.	Gila River Indian Community (AZ)	11,226
7.	Oglala Sioux (SD)	14,068
7.	Cocopah Tribe (AZ)	1,019
7.	Navajo Nation (AZ, NM, & UT)	155,214
10.	Lower Brule Sioux Tribe (SD)	1,353
10.	Hopi Tribe (AZ)	6,815
10.	Sac & Fox Tribe of the Mississippi (IA)	616
10.	Rosebud Sioux Tribe (SD)	9,050
14.	Zuni Tribe (NM)	7,758
14.	Northern Cheyenne (MT)	4,470
14.	Hualapai Indian Tribe (AZ)	1,353
17.	Quechan Tribe of Fort Yuma (AZ & CA)	1,810
17.	Mescalero Apache Tribe (NM)	3,156
17.	Chippewa Cree Tribe (MT)	1,605
17.	Pala Band of Luiseno Mission Indians (CA)	1,573
17.	Yurok Tribe (CA)	1,103
17.	Red Lake Band of Chippewa (MN)	5,162
17.	Yavapai-Apache Nation (AZ)	743
17.	Mississippi Band of Choctaw Indians (MS)	4,311
17.	Pueblo of Santo Domingo (MN)	3,166
17.	Santa Rosa Indian Community (CA)	517
17.	Cheyenne River Sioux (SD)	8,466
17.	Spirit Lake Tribe (ND)	4,435
17.	Fort Mojave Indian Tribe (AZ, CA, & NV)	1,043
17.	Turtle Mountain Chippewa (ND)	5,815
17.	Passamaquoddy Tribe (Pleasant Point – MA)	640

As discussed at the being of this chapter, this percentage-based ranking is only one means of comparing the relative transit needs of reservations. A similar comparison may be done based on actual total small urban and rural populations.

Table 3.8 identifies the nation's most populous reservations as well as the size of each reservation's mobility-dependent subpopulation. As this data indicates and as discussed earlier, there is a strong correlation between total population and the size of various mobility dependent sub-populations.

Table 3.8 Total Population vs. Mobility Dependent Sub-Populations

	Total			School		
Indian Tribal Entities (State)	Population	Seniors	Disabled	Aged	Poverty	<u>NVH</u>

Given the high correlation that exists between total population and the size of various mobility dependent subgroups, ranking reservations by total population would result in a list that would largely mirror a list of the most needy reservations in terms of the aggregate number of actual residents in each need category. Table 3.9 presents such a list and identifies the size of each reservation's small urban and rural, non-metropolitan population.

 Table 3.9
 Aggregate Mobility-Dependent Populations – Population-Based Rank

Rank Reservation (State) SUR Population 1. 383.491 Cherokee Nation (OK) 2. Chickasaw Nation (OK) 277,416 3. Muscogee-Creek Nation (OK) 230,486 Choctaw Nation (OK) 222,381 4. 5. There is a striking difference between the listings in Tables 3.7 and 3.9. Only one reservation, the Navajo Nation in Arizona, New Mexico, and Utah, shows up in both lists. There is, therefore, a stark difference in outcomes if need determinations are based on aggregate populations or on a percentage of population basis. It may, therefore, be appropriate to give consideration to both approaches. These discussions are the topic of Chapter 4.

4. COMPARISONS – DEMOGRAPHIC NEED INDICATORS VS TRIBAL TRANSIT GRANT RECIPIENTS

4.1 Introduction

Identifying and quantifying the need for transit services is an art and not a science. Contributing determinants may include census data, citizen and user surveys, and interviews with advocacy groups and social agencies, etc. Researchers use all related data and input in an attempt to assess actual needs and to convert expressed needs into related transit service plans.

The preceding chapter focused on census data that is traditionally used as a proxy determinant for transit needs. In many respects, this data may be one of the most quantifiable measures of need. As discussed above, however, it certainly is not the only measure of need. Therein lies the artful nature of determining actual need, designing transit systems and services to address these needs, and making responsive grant awards.

This chapter focuses on the most transit needy reservations as identified at the end of Chapter 3 and compares related lists (population and percentage based) to the list of recipients of first-year tribal transit funding. These comparisons are certainly not the final word concerning the appropriateness of these grant awards. They may, however, help identify various demographic factors that may be worthy of consideration as future years' grant applications are reviewed, rated, and selected for funding.

4.2 Chapter Highlights

- Many of the most need-intensive reservations, based on demographic data, received first year 5311c tribal transit funding.
- Several tribes and reservations with very small non-metropolitan populations received 5311c funding.
- Funding determinations may be based on numerous factors, only one of which involves census-based need indicators.
- Demographic based need assessments may, however, be worthy of consideration in the grant review, rating, and selection process.

4.3 Needy Reservations vs. Grant Recipients

Tables 3.7 and 3.9 at the end of Chapter 3 listed what may be the reservations with the greatest mobility needs based strictly on the size of their mobility-dependent sub-populations. Table 3.7 listed those reservations with the largest related populations, as a percentage of their total population, while Table 3.9 was based on total actual populations. As explained in Chapter 3, most of the underlying, percentage-based calculations were limited to reservations that had at least 500 residents living in non-metropolitan, small urban and rural areas.

Table 4.1 identifies all the tribes that submitted first-year grant applications for 5311c tribal transit funding. The table categorizes these applicants based on their aggregate, percentage-based need ranking as discussed near the end of Chapter 3 and identifies if their application was funded, the purpose of the grant, and the size of each applicant's small urban and rural population.

As indicated in Chapter 3, the census data used to develop these comparisons reflect on-reservation populations. In some instances, however, tribes have trust lands that are located off their reservation. In some cases these trust lands are near the reservation, but in other instances they may be located hundreds of miles away. A case-by-case analysis would be required to identify the location of these lands. In instances where these lands are located near the reservation and where they have a significant number of residents, including these populations in the population numbers presented below could have an impact of a reservation's resulting ranking. Related information is presented in Table 3.1 and its corresponding narrative.

Table 4.1's list of reservations does not coincide with the list presented in Table 3.7. The reason for this variance lies with the fact that not all the tribes identified as being potentially transit needy actually submitted applications for 5311c tribal transit funding. Table 4.1 includes only those tribes and reservations that actually submitted related grant applications. This table's ranking numbers coincide with those in Table 3.7 but go beyond listing only the top 25. It should also be noted, however, that Table 4.1 gives some applicants an unranked designation. This designation relates to the fact that the reservation has a small urban and rural, non-metropolitan population of less than 500 residents. In a few instances, this designation related to the fact that no census data is available concerning that reservation.

Wampanoag Tribe of Gay Head (MA)	91

As Table 4.1 indicates, many of the tribes and reservations that were found to be potentially in need of transit services, based on the percentage size of what are traditionally mobility dependent subpopulations, did, in fact, receive first-year 5311c funding. It may also be noted that many of the first year recipients were unranked because of their small non-metropolitan populations. In at least two instances, census data indicates that grantee tribes have reservations with no non-metropolitan residents.

Table 3.8 at the conclusion of Chapter 3 also ranked reservations based on the actual size of their mobility dependent subpopulations. Table 4.2 identifies all of the tribes that submitted first year grant applications for 5311c tribal transit funding and categorizes these applicants based on the actual size of each reservation's small urban and rural, non-metropolitan population.

As was the case with Table 4.1, this table also identifies if the application was funded, the purpose of the grant, and the size of each applicant's small urban and rural population. Table 4.2 also shows each applicant's previously discussed percentage-based ranking as presented in Table 4.1. NR designations relate to the fact that a reservation had a small urban and rural, non-metropolitan population of less than 500. In a few instances, this designation related to the fact that no census data is available concerning that reservation.

As was the case with Table 4.1, Table 4.2 illustrates that many of the reservations that were identified as being potentially in need of transit services, based upon the actual size of what are traditionally mobility-dependent sub-populations, did in fact receive funding during the first year of the 5311c tribal transit program. Conversely, many of the recipients were ranked well down on the list and had very small or non-existent non-metropolitan populations.

It must be reiterated, however, that demographic data is not a perfect indicator or proxy for actual transit needs. Related grant awards appropriately must consider other indicators of needs and each applicant's plan for addressing these needs. The demographic-based assessments presented in Tables 4.1 and 4.2 may, however, be worthy of consideration as future years' grant applications are reviewed, rated, and selected for funding.

5. SUMMARY AND RECOMMENDATIONS

Comparing Indian reservations with one another is like comparing states with one another. It becomes immediately obvious that they are very dissimilar. Reservations vary greatly in terms of their geographic size, their populations, and their population densities.

In terms of size, several reservations are larger than some states, but many cover less than one square mile. Some reservations have over 100,000 residents, but the vast majority have fewer than 5,000 residents. Reservation population densities vary greatly, but many of the most densely populated reservations are geographically small. Some reservations are located in or at least partially within metropolitan areas, but most are predominantly non-metropolitan.

As is the case with land areas and populations, it is impossible to stereotype reservation transit needs. Identifying and quantifying these needs is an art and not a science. Researchers and transit planners consider census data and input generated from citizen and user surveys and interviews with advocacy groups and social agencies in an attempt to assess actual needs and then to convert expressed needs into related transit service plans.

This study focuses on census data and attempts to interpret and compare data related to population subgroups that are traditionally mobility dependent. These subgroups include senior citizens, disabled and low income individuals, school-age youth, and households without vehicles. A review of this data may provide valuable insights into the aggregate mobility needs of individual reservations and a comparison of the needs of one reservation versus another.

These demographic based assessments may be made based on both the actual size of related populations and on the percentage size of each subgroup compared to a reservation's total population. Comparing population-based and percentage-based rankings shows stark differences. It may, therefore, be appropriate to consider both approaches when attempting to make actual assessments of an individual reservation's transit needs or when attempting to compare the needs of one reservation with those of others.

These population and percentage-based rankings may be compared to the list of tribes and reservations that received first-year funding in the new tribal transit program. All related rankings should, however, be based on non-metropolitan populations since the focus of that program is on small urban and rural areas. It may also be appropriate to limit related comparisons to reservations that have a critical mass of non-metropolitan residents. Such a mass might be necessary to warrant the provision of transit services.

Chapter 3 develops the type rankings described in the preceding paragraphs and Chapter 4 compares these rankings with FTA grant awards during the first year of the new tribal transit program. Given the subjective nature of related assessments, it would be inappropriate to discredit the FTA for not funding applications from highly-ranked tribes or for funding applications related to low-ranked tribes. Related discrepancies may, however, illustrate that it may be appropriate to consider related demographic data when making future assessments. It may be especially appropriate to give considerable weight to each reservation's small urban and rural, non-metropolitan population during the review process since that is, in fact, the focus of the 5311c program.
